SUMMARY

Final-year B.Sc. (Hons.) Computer Science student who builds and ships real products — from full-stack web apps to AI-integrated mobile apps. Hands-on with React, Next.js, Node.js, Flutter, and Firebase, with a growing interest in applying AI/LLMs to solve practical problems. Enjoys working in fast-paced, scrappy environments and turning ideas into working software fast.

EDUCATION

Rajasthan, India
Aug 2023 – Present

Tribhuvan College, Nalanda University
Bachelor of Science in Computer Science

EXPERIENCE

IIT-Madras
June 2025 – Aug 2025

Flutter App Developer Intern, Techobytes

- Built and shipped 3+ cross-platform mobile apps (Note App, To-Do App, Weather App) independently using Flutter and Dart, covering full UI and core functionality
- Designed custom UI widgets, navigation flows, and layouts across multiple projects from scratch
- Debugged and resolved real app-level issues through hands-on, project-based development

PROJECTS

NoteSpace — Android Note-Taking App
Flutter, Dart, Gemini API, Agentic AI, BYOK

- Solved a real accessibility problem — expensive phones offer agentic AI-powered notes (summaries, translation, meeting transcripts) that budget phones don't
- Built a BYOK (Bring Your Own Key) system letting users plug in their own Gemini API key to unlock the same AI features for free, with zero app bloat and zero data leaving the device
- Designed the system so AI processing runs entirely through the user's own key, keeping data private and never leaving the device

WatchParty.website
React, Node.js, Socket.io, WebRTC, Firebase

- Built a full-stack platform where users host private rooms to watch videos in perfect sync with friends remotely — including live chat and video calls
- Engineered real-time synchronization using WebRTC and Socket.io to handle multiple concurrent rooms with minimal playback lag
- Integrated Google OAuth with backend session and access control for secure multi-user rooms

College Academic Management Portal
Full-Stack Web App + React Native Mobile App

- Built a centralized academic portal (web + mobile) serving 3 user roles (student, teacher, admin) across 6+ modules — attendance, timetable, syllabus, announcements
- Designed a role-based permission system across both platforms, with a React Native app extending core features to mobile
- Implemented attendance, timetable, and announcement modules with real-time updates across student and teacher views

SKILLS

Technical Skills

- Languages: Python, JavaScript, Java, C++, Dart
- Web: React, Next.js, Node.js, NestJS, Express.js, HTML/CSS
- Mobile: Flutter, React Native, Kotlin
- Database: MySQL, PostgreSQL, Firebase
- Tools: Git, GitHub, Vercel, Render
- AI/Tools: Gemini API, Prompt Engineering, Agentic AI workflows

Soft Skills

- Languages: Hindi, Urdu, English
- Team Collaboration, Problem Solving, Quick Learner
